

E.D.R.O.TM

PROOF OF PERFORMANCE

Jane Hammer, Kathryn, North Dakota

To Whom It May Concern:

I started using **E.D.R.O.TM** after attending the Charmayne James Barrel Clinic held in Fergus Falls, MN in early September, 2006. I am feeding it to seven horses ranging in age from 18 months to 13 years. All seven horses readily consume it sprinkled on top of their wet beet pulp.

Three of the seven horses have trouble with coughing when consuming hay or when working industry conditions. This causes me to feed Tri-Hist granules and soak/wet hay for the entire group. Since beginning **E.D.R.O.TM**, I don't have to wet the hay, which creates a challenge in North Dakota in the winter. I have also been able to stop feeding Tri-Hist. I haven't heard a cough or wheeze from any of the group. One of the horses that had a coughing problem is a four-year-old that I'm starting in barrels. There was a local arena that had a fall barrel series and it has a warm-up area that is extremely dusty. In fact, the back part of the barn/arena gets so dirty that it is difficult to see from one end to the other. I didn't hear a cough from him during any of the time we were there.

I am extremely satisfied with the product and the service from the DPI GLOBAL, Inc. Representatives.

Sincerely,

Jane Hammer
Kathryn, North Dakota
